Considerations for Determining the Filing

Questions the attorney will need to answer to make a decision. Does the design sufficiently allow them to answer these questions? Was it a conviction or a non-conviction? Was the count from when they were a under 18 or under 21? Was the charge a felony or not? Is the convicted count eligible for expungement or sealing? When did the incident occur, has the required time passed to take an action? Is the state attorney present, will this be a stipulated filing?

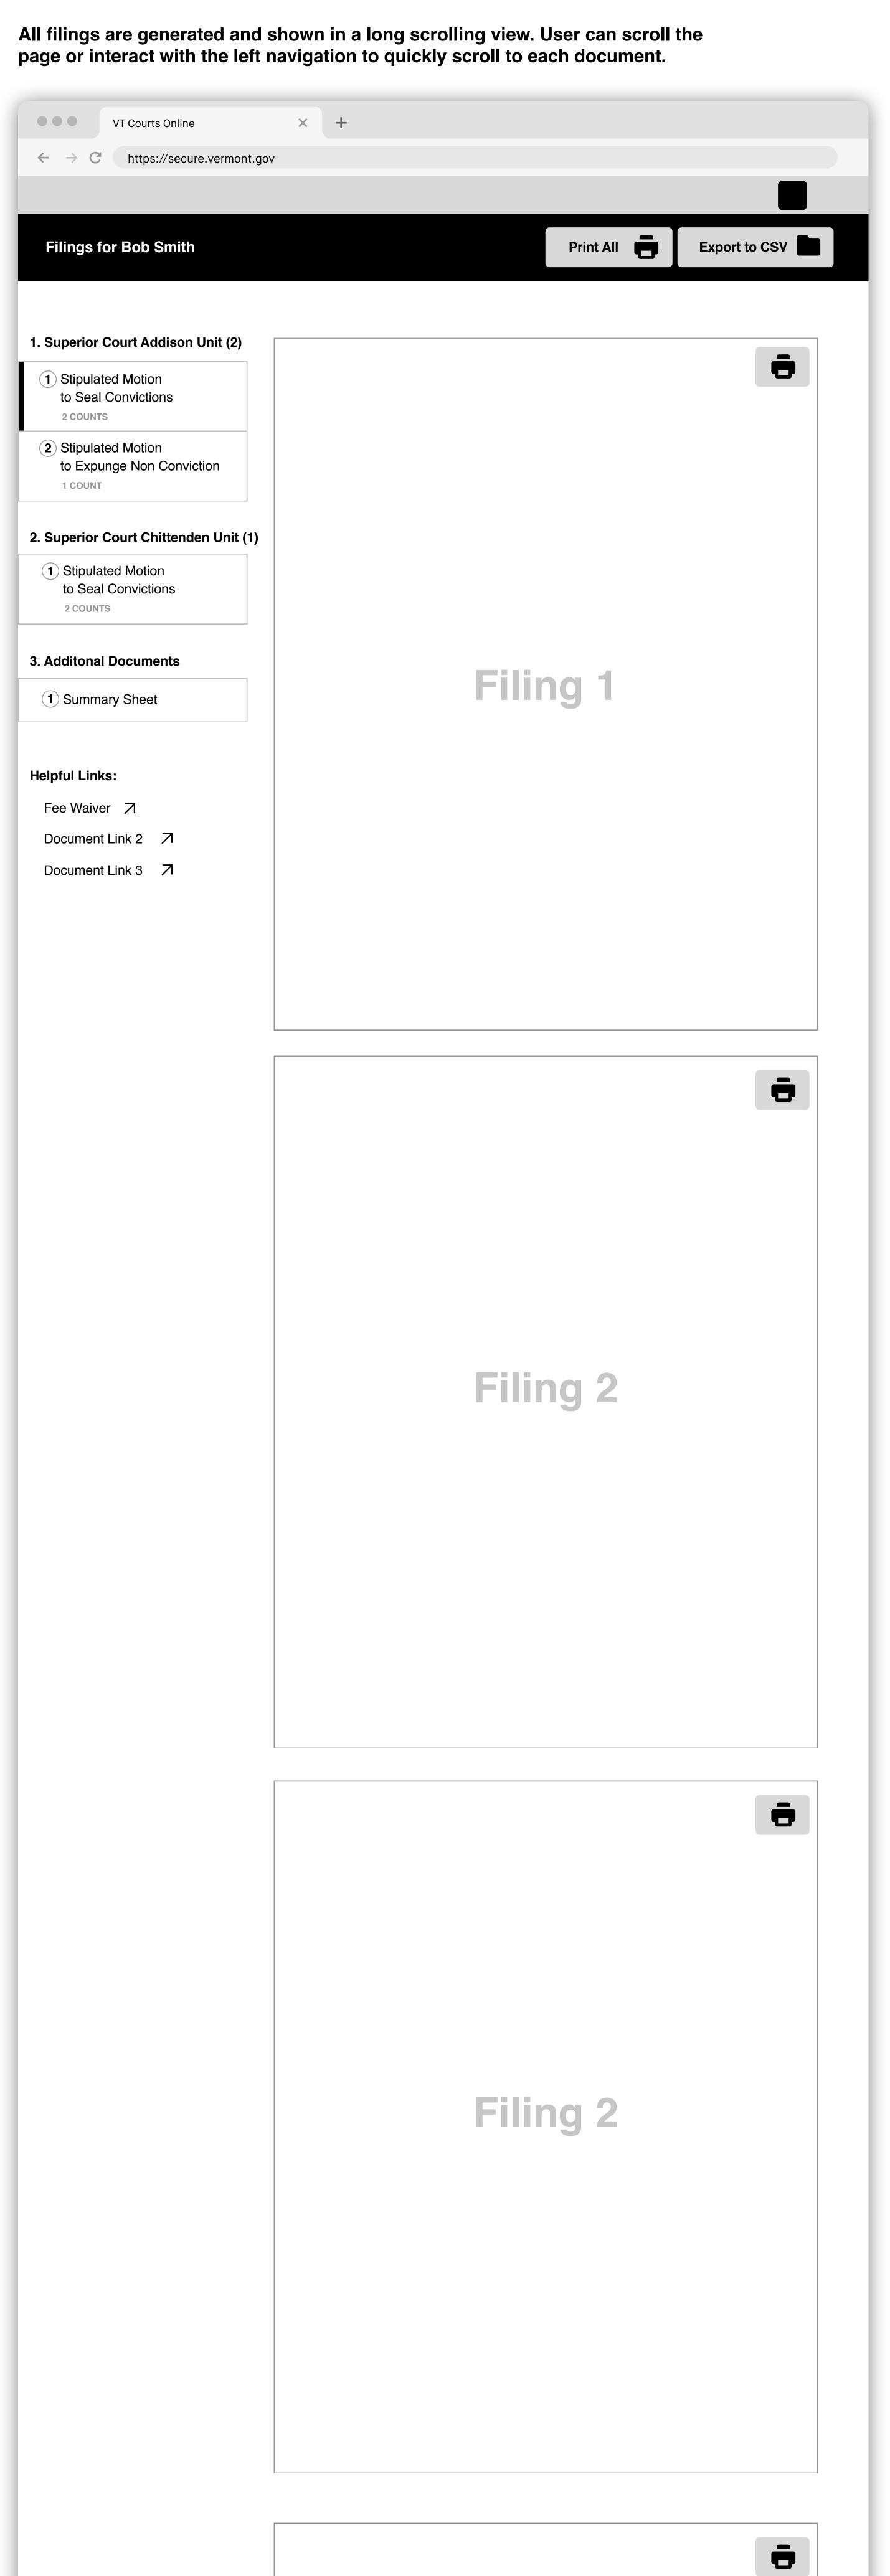

The attorney will use the drop down to determine the filing motion for each count.

In some cases we may be able to automatically pick a default (e.g. if "Felony" && "Conviction" set Filing Type to "Ineligible - No Filing"; or if a "Non Conviction" set Filing Type to "Expunge Non Conviction"). This could save time and help minimize errors; however, the attorney can always decide to pick another filing type. This approach would allow for specific logic to be incrementally added, with the default falling back to "Choose Filing" if one of our specific cases were not

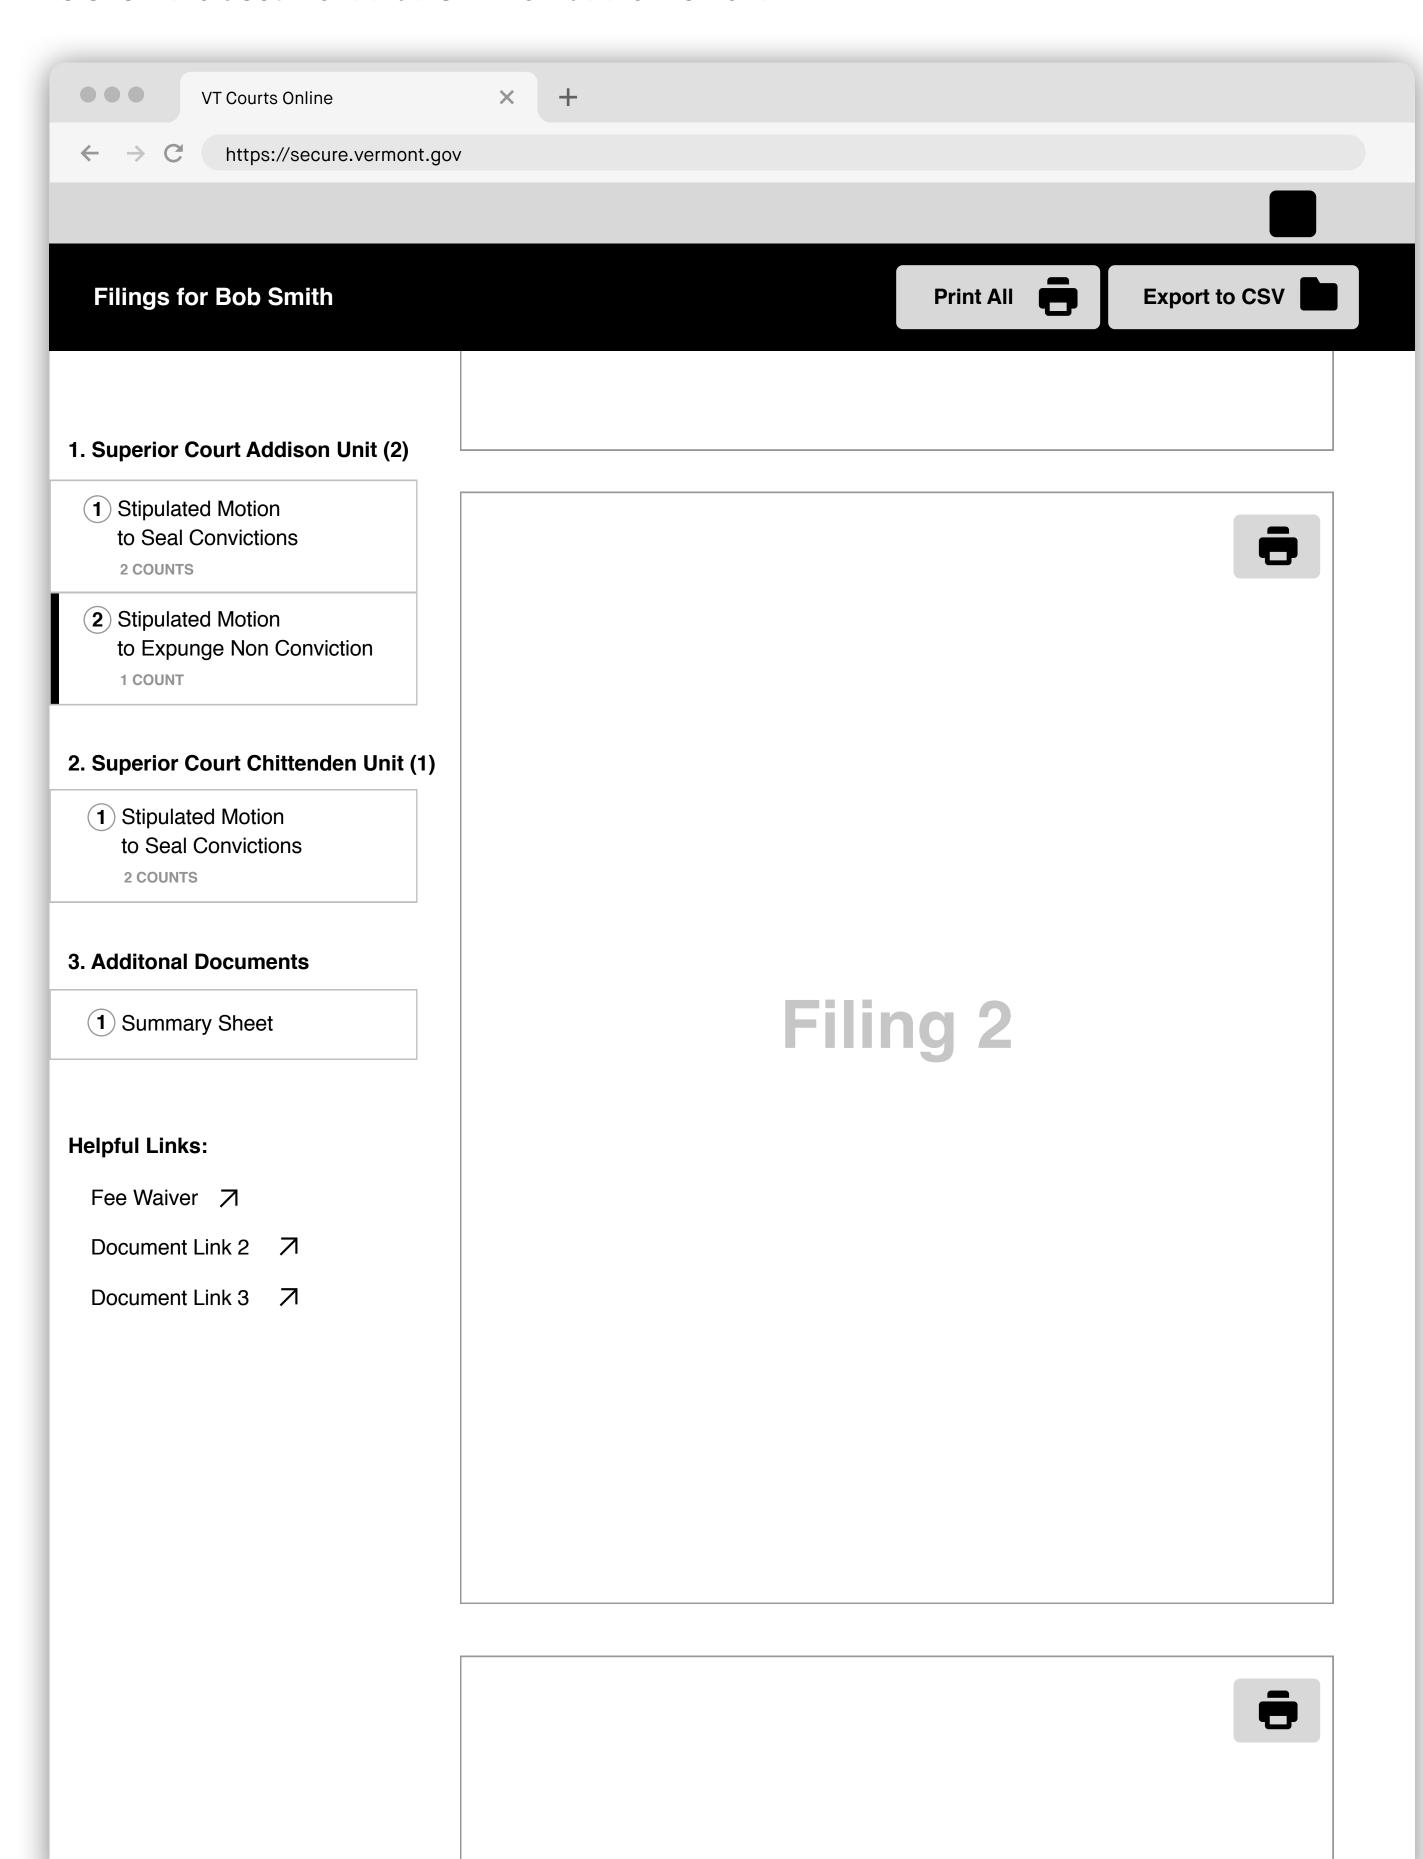

Documents Page

Summary Sheet

When the user scrolls the page, the left navigation "current indicator" will move to show the document that is in view at the moment.

Considerations for Generating Documents

Counts will be combined into one filing if the following three parameters for a count are identical. 1) Court Unit (e.g. Superior Court Chittenden Unit, Superior Court Addison Unit, etc.) 2) Motion Type (i.e. Seal, Expunge Conviction, Expunge Non-Conviction) 3) Stipulated (Yes/No)

Based on the parameters of the count(s) one of the following document templates will be populated and shown on the documents page. Stipulated Motion to Expunge Conviction Stipulated Motion to Expunge Non-Conviction Stipulated Motion to Seal Conviction Motion to Expunge Conviction Motion to Expunge Non-Conviction Motion to Seal Conviction **Note that each template will need to support a single count as well as many counts. Text should be

pluralized when many counts are present. It may be

simpler to create a different template for plural versions
